Today: one shared pull-through cache
Sandbox A
(read-only)
A reads
no direct
route
B reads
Sandbox B
(read-only)
Shared
gateway
Artifactory remote repo
Content (bytes)
reads can't change
Read-triggered records
count, last downloader,
remembered 404
Shared resources
CPU, queues, DB
Upstream
(PyPI)
A's read changes a record;
B's later read observes it
Proposed: frozen admission, private immutable serving
once
Upstream
(PyPI)
Trusted admission
(before the run)
resolve, verify hashes
Frozen catalog
24 wheels, 5.0 MB
Sandbox A
origin-bound route
Private server A
read-only copy
Sandbox B
Private server B
read-only copy
Still shared:
host CPU, memory
bandwidth, kernel
counters
(separate problem:
time protection)
Unknown package -> local failure, not a shared upstream fetch
